Norwood Products offers the opportunity to recreate history with its traditional post and rail fences crafted from durable Australian Timbers.

Norwood Post and Rail is an investment that not only provides an effective barrier for livestock but will enhance and add value to your property for years to come.

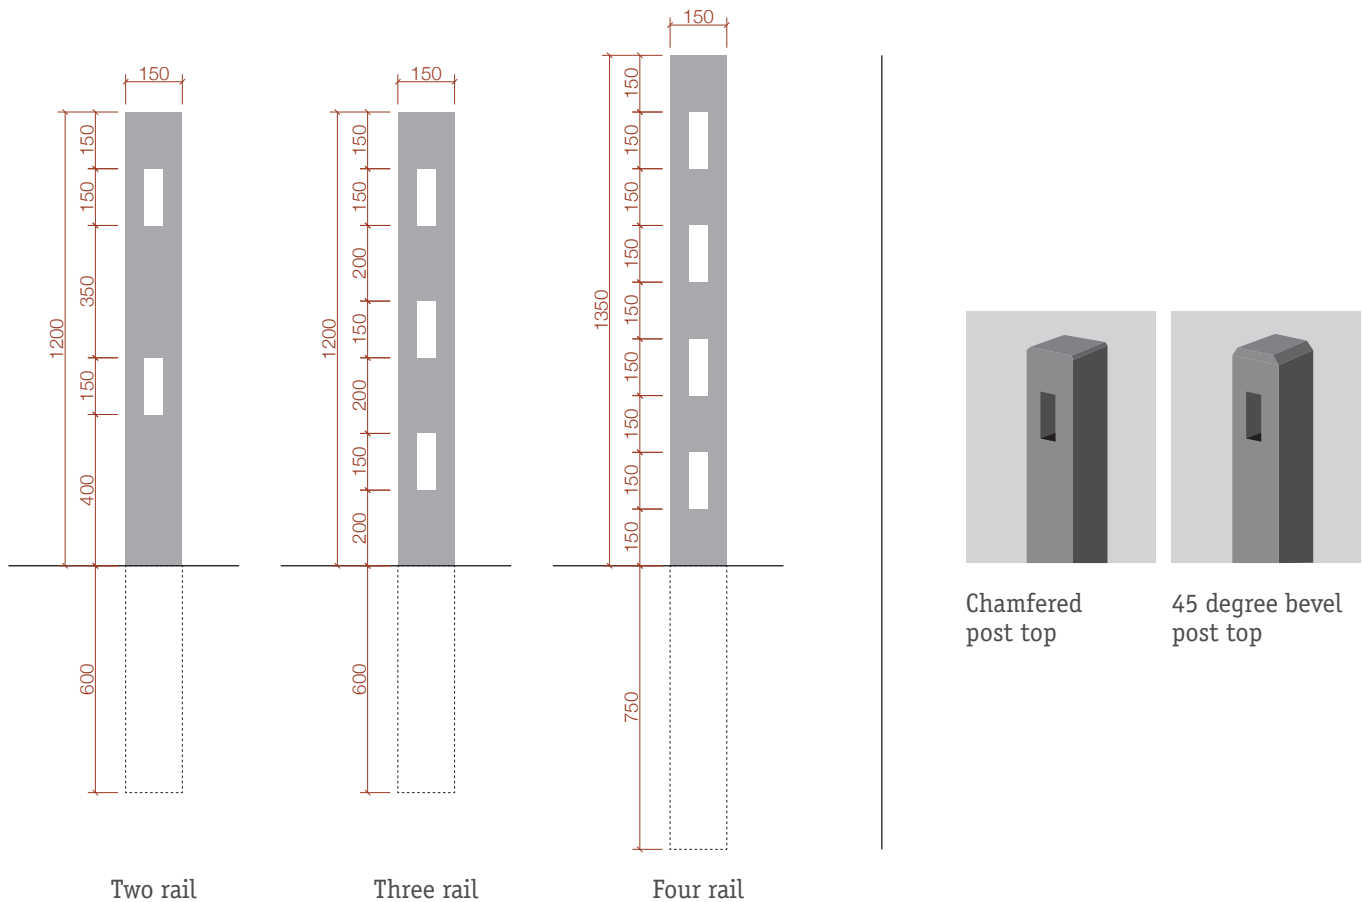

Ideal for use in rural zones for stock enclosures or property enhancement, and parks and open space environments where pedestrian control is necessary. Available in kit form, ready to install.

Carefully selected timber is sourced from sustainable forests.

Species generally used are Forest Red Gum, Cypress Pine, Spotted Gum and Ironbark. These varieties are all either class 1 or class 2 durability timbers.

Standard rail spacing and post design

Fences can follow undulating or sloping terrain and can follow curves or bends.

Rails butt together inside the mortice and do not require fixings.

Norwood Post and Rail Fencing can be combined with electric or plain wires to provide secure, stock proof fencing.

Norwood Post and Rail Fencing can be adapted for a variety of uses such as ménages/arenas, stable fit outs and more.

Available in one, two, three and four rail systems.
